DETAILED ACTION

Response to Arguments

Applicant's arguments, filed 3/28/2008, with respect to where the blower would be placed in the combined references and that the combination as suggested by the examiner would not work have been fully considered and are persuasive. The 103(a) rejection of claim 21 over Johnson et al. and Berthon-Jones has been withdrawn (and all dependent claims therewith).

Applicant's arguments, filed 3/28/2008, with respect to the references not teaching a controller that uses the first and second pressures measured and a known airflow resistance coefficient of the tube (as opposed to some sort of inherent resistance coefficient from the tube properties upon calibration and/or manufacture), have been fully considered and are persuasive. The 103(a) rejection of claim 21 over Johnson et al. and Berthon-Jones and of claim 23 over Johnson et al., Berthon-Jones and More has been withdrawn (and all dependent claims therewith).

Applicant's arguments, filed 3/28/2008, with respect to the offset compensation means of More not disclosing a possible difference of gauging between two pressure sensors as explicitly defined by the applicant in the specification and arguments submitted 8/16/2007 have been fully considered and are persuasive. The 103(a) rejection of claims 23, 39, and 40 over Johnson et al., Berthon-Jones and More has been withdrawn (and all dependent claims therewith).

However, all other arguments are unpersuasive for reasons outlined in previous office actions. In addition, the secondary considerations submitted by applicant were not given much weight because they were not submitted in affidavit form. Also, applicant's arguments regarding the availability of the prior art are unpersuasive because More is a continuation in part of an

application filed 12/21/2001 (before the priority date of the current application) and the parent case contains the relevant disclosure relied upon in the Office Action and Orr claims priority to a provisional application filed on 5/7/2001.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Surjadi et al. is cited to show another pressure transducer offset compensation means.
